## Vhembe District Project Overview

By way of background, Zimako Smart Business Solutions was appointed on a **36-month tender contract** to conduct indigent status verification across the four local municipalities within Vhembe District Municipality, namely:

1. Makhado Local Municipality
2. Musina Local Municipality
3. Thulamela Local Municipality
4. Collins Chabane Local Municipality

As the project approaches completion, we are required to submit a comprehensive **three-year Project Close-Out Report**, highlighting the work undertaken, verification outcomes, key findings, challenges and recommendations.

### 1. Verification Outcomes – Three-Year Analysis

The report should provide a breakdown of all records verified during **Year 1, Year 2 and Year 3**, including a consolidated overview for each local municipality and the district as a whole.

The analysis should include the following classifications:

- **Approved:** Applicants who successfully met the indigent qualification criteria.
- **Declined:** Applicants who did not meet the qualifying criteria.
- **Deceased:** Applicants identified as deceased.
- **Duplicates:** Duplicate applications or records identified.
- **Child-Headed Households:** Households identified under this category.

### 2. Applicant Segmentation and Risk Analysis

In addition to the verification outcomes, we would like the data segmented according to the following:

- **Gender:** Distribution of applicants by gender across all four municipalities.
- **Credit Bureau Income Buckets:** Categorisation of applicants according to available income bands.
- **Directorships:** Identification of applicants linked to registered businesses, with particular emphasis on individuals holding multiple directorships.
- **Property Ownership:** Identification of applicants linked to registered properties, highlighting those owning multiple properties.
- **Government Employees:** Identification of applicants employed by government departments or public institutions, for further assessment against the applicable indigent qualification criteria.

The objective is to identify potential irregularities, qualification risks and areas requiring further investigation or verification.

### 3. Geographic Analysis and Heat Maps

Where residential address information is available, the report should incorporate **geographic heat maps** showing the distribution and concentration of indigent applicants across the four municipalities.

Ideally, these maps should highlight areas with high concentrations of approved applicants, declined applications and potential verification risks, allowing the municipality to identify geographic trends and prioritise interventions.

**4. Key Findings and Recommendations**

Beyond presenting statistical information, the report should provide meaningful insights and practical recommendations addressing:

- Data quality challenges, duplicate records and incomplete applicant information.
- Inconsistencies in indigent qualification criteria and policies across the four municipalities.
- Opportunities to develop a standardised district-wide indigent policy and data collection process.
- Measures to strengthen ongoing verification, monitoring and prevention of potential indigent benefit abuse.
- Recommendations for improving internal municipal capacity and effective utilisation of the indigent verification system.
- A proposed approach for maintaining an accurate, reliable and continuously updated indigent register.

**5. Expected Deliverable**

The ultimate objective is to produce a **professional, data-driven Project Close-Out Report** that demonstrates the work undertaken over the 36-month contract period while providing Vhembe District Municipality with actionable insights and recommendations for improving its indigent management processes going forward.

The report should be supported by clear statistical tables, comparative graphs, geographic heat maps and an executive summary highlighting the most significant findings.

Kindly review the available data and advise on the feasibility of producing the above analysis, including any additional information or clarification you may require.
